Midterm 1 W24

Tianyu Lin

2024-02-06

Instructions

Answer the following questions and complete the exercises in RMarkdown. Please embed all of your code and push your final work to your repository. Your code must be organized, clean, and run free from errors. Remember, you must remove the `#` for any included code chunks to run. Be sure to add your name to the author header above.

Your code must knit in order to be considered. If you are stuck and cannot answer a question, then comment out your code and knit the document. You may use your notes, labs, and homework to help you complete this exam. Do not use any other resources- including AI assistance.

Don't forget to answer any questions that are asked in the prompt!

Be sure to push your completed midterm to your repository. This exam is worth 30 points.

Background

In the data folder, you will find data related to a study on wolf mortality collected by the National Park Service. You should start by reading the `README_NPSwolfdata.pdf` file. This will provide an abstract of the study and an explanation of variables.

The data are from: Cassidy, Kira et al. (2022). Gray wolf packs and human-caused wolf mortality. Dryad (https://doi.org/10.5061/dryad.mkkwh713f).

Load the libraries

```
library("tidyverse")
library("janitor")
```

Load the wolves data

In these data, the authors used `NULL` to represent missing values. I am correcting this for you below and using `janitor` to clean the column names.

```
wolves <- read.csv("data/NPS_wolfmortalitydata.csv", na = c("NULL")) %>% clean_names()
```

Questions

Problem 1. (1 point) Let's start with some data exploration. What are the variable (column) names?

```
names(wolves)
```

```
##  [1] "park"         "biolyr"       "pack"         "packcode"     "packsize_aug"
##  [6] "mort_yn"      "mort_all"     "mort_lead"    "mort_nonlead" "reprody1"
## [11] "persisty1"
```

Problem 2. (1 point) Use the function of your choice to summarize the data and get an idea of its structure.

```
summary(wolves)
```

```
##      park               biolyr         pack              packcode
##  Length:864         Min.   :1986   Length:864         Min.   :  2.00
##  Class :character   1st Qu.:1999   Class :character   1st Qu.: 48.00
##  Mode  :character   Median :2006   Mode  :character   Median : 86.50
##                     Mean   :2005                      Mean   : 91.39

```

```
str(wolves)
```

```
## 'data.frame':    864 obs. of  11 variables:
##  $ park        : chr  "DENA" "DENA" "DENA" "DENA" ...
##  $ biolyr      : int  1996 1991 2017 1996 1992 1994 2007 2007 1995 2003 ...
##  $ pack        : chr  "McKinley River1" "Birch Creek N" "Eagle Gorge" "East Fork" ...
##  $ packcode    : int  89 58 71 72 74 77 101 108 109 53 ...
##  $ packsize_aug: num  12 5 8 13 7 6 10 NA 9 8 ...
##  $ mort_yn     : int  1 1 1 1 1 1 1 1 1 1 ...
##  $ mort_all    : int  4 2 2 2 2 2 2 2 1 ...
##  $ mort_lead   : int  2 2 0 0 0 0 1 2 1 1 ...
##  $ mort_nonlead: int  2 0 2 2 2 2 1 0 1 0 ...
##  $ reprody1    : int  0 0 NA 1 NA 0 0 1 0 1 ...
##  $ persisty1   : int  0 0 1 1 1 1 0 1 0 1 ...
```

Problem 3. (3 points) Which parks/ reserves are represented in the data? Don't just use the abstract, pull this information from the data.

```
wolves%>%
  count(park)
```

```
##   park   n
## 1 DENA 340
## 2 GNTP  77
## 3  VNP  48
## 4  YNP 248
## 5 YUCH 151
```

There are five parks, which are DENA(Denali National Park and Preserve), GNTP(Grand Teton National Park), VNP(Voyageurs National Park), YNP(Yellowstone National Park) and YUCH(Yukon-Charley Rivers National Preserve).

Problem 4. (4 points) Which park has the largest number of wolf packs?

DENA

```
wolves%>%
  filter(park=="DENA")%>%
  count(pack)%>%
  dim()
```

```
## [1] 69  2
```

GNTP

```
wolves%>%
  filter(park=="GNTP")%>%
  count(pack)%>%
  dim()
```

```
## [1] 12  2
```

VNP

```
wolves%>%
  filter(park=="VNP")%>%
  count(pack)%>%
  dim()
```

```
## [1] 22  2
```

YNP

```
wolves%>%
  filter(park=="YNP")%>%
  count(pack)%>%
  dim()
```

```
## [1] 46  2
```

YUCH

```
wolves%>%
  filter(park=="YUCH")%>%
  count(pack)%>%
  dim()
```

```
## [1] 36  2
```

The DENA have the larges number of wolf packs

Problem 5. (4 points) Which park has the highest total number of human-caused mortalities `mort_all` ?

```
wolves%>%
  group_by(park)%>%
  summarize(max_mort_all=max(mort_all))
```

```
## # A tibble: 5 × 2
##   park  max_mort_all
##   <chr>        <int>
## 1 DENA             4
## 2 GNTP             4
## 3 VNP              2
## 4 YNP              4
## 5 YUCH            24
```

The YUCH have the highest total number of human-caused mortalities

The wolves in Yellowstone National Park (https://www.nps.gov/yell/learn/nature/wolf-restoration.htm) are an incredible conservation success story. Let's focus our attention on this park.

Problem 6. (2 points) Create a new object "ynp" that only includes the data from Yellowstone National Park.

```
ynp<- wolves%>%
    filter(park=="YNP")
```

Problem 7. (3 points) Among the Yellowstone wolf packs, the Druid Peak Pack (https://www.pbs.org/wnet/nature/in-the-valley-of-the-wolves-the-druid-wolf-pack-story/209/) is one of most famous. What was the average pack size of this pack for the years represented in the data?

```
ynp%>%
  filter(pack=="druid")%>%
  summarize(mean_pack_size=mean(packsize_aug))
```

```
##   mean_pack_size
## 1       13.93333
```

Problem 8. (4 points) Pack dynamics can be hard to predict- even for strong packs like the Druid Peak pack. At which year did the Druid Peak pack have the largest pack size? What do you think happened in 2010?

```
ynp%>%
  filter(pack=="druid")%>%
  arrange(desc(packsize_aug))
```

```
##    park biolyr  pack packcode packsize_aug mort_yn mort_all mort_lead
## 1   YNP   2001 druid       26           37       0        0         0
## 2   YNP   2000 druid       26           27       1        1         0
## 3   YNP   2008 druid       26           21       0        0         0
## 4   YNP   2003 druid       26           18       0        0         0
## 5   YNP   2007 druid       26           18       0        0         0
## 6   YNP   2002 druid       26           16       0        0         0
## 7   YNP   2006 druid       26           15       0        0         0
## 8   YNP   2004 druid       26           13       0        0         0
## 9   YNP   2009 druid       26           12       0        0         0
## 10  YNP   1999 druid       26            9       0        0         0
## 11  YNP   1998 druid       26            8       0        0         0
## 12  YNP   1997 druid       26            5       1        2         1
## 13  YNP   1996 druid       26            5       0        0         0
## 14  YNP   2005 druid       26            5       0        0         0
## 15  YNP   2010 druid       26            0       0        0         0
##    mort_nonlead reprody1 persisty1
## 1             0        1         1
## 2             1        1         1
## 3             0        1         1
## 4             0        1         1
## 5             0        1         1
## 6             0        1         1
## 7             0        1         1
## 8             0        1         1
## 9             0        0         0
## 10            0        1         1
## 11            0        1         1
## 12            1        1         1
## 13            0        1         1
## 14            0        1         1
## 15            0        0        NA
```

The 2001 is the Druid Peak pack have the largest pack size. On the data , we can find the pack size become the smallest one. I think he environment maybe very terrible to let wolves to live. And the legal challenge results the population of wolves to decress.

Problem 9. (5 points) Among the YNP wolf packs, which one has had the highest overall persistence `persisty1` for the years represented in the data? Look this pack up online and tell me what is unique about its behavior-specifically, what prey animals does this pack specialize on?

```
ynp%>%
  group_by(pack)%>%
  summarize(total_persisty=sum(persisty1,na.rm = T))%>%
  arrange(desc(total_persisty))
```

```
## # A tibble: 46 × 2
##    pack        total_persisty
##    <chr>                <int>
##  1 mollies                 26
##  2 cougar                  20
##  3 yelldelta               18
##  4 druid                   13
##  5 leopold                 12
##  6 agate                   10
##  7 8mile                    9
##  8 canyon                   9
##  9 gibbon/mary              9
## 10 nezperce                 9
## # ℹ 36 more rows
```

The mollies has had the highest overall persistence `persisty1` for the years represented in the data. The Mollie's pack was originally called the Crystal Creek pack. Wolf kills provide carcasses that are utilized by a variety of scavengers, including grizzly bears.

Problem 10. (3 points) Perform one analysis or exploration of your choice on the `wolves` data. Your answer needs to include at least two lines of code and not be a summary function.

I'm interesting in which pack in the DENA had the highest verall persistence `persisty1` for the years between 1997 to 2007 represented in the data?

```
wolves%>%
  filter(between(biolyr,1997,2007),park=="DENA")%>%
  group_by(pack)%>%
  summarize(total_persisty=sum(persisty1,na.rm = T))%>%
  arrange(desc(total_persisty))
```

```
## # A tibble: 38 × 2
##    pack            total_persisty
##    <chr>                    <int>
##  1 East Fork                   11
##  2 McKinley Slough              9
##  3 Kantishna River              8
##  4 Mt Margaret                  8
##  5 100 Mile                     7
##  6 Starr Lake                   7
##  7 Grant Creek                  6
##  8 Pinto Creek                  6
##  9 Straightaway                 5
## 10 Bearpaw                      4
## # ℹ 28 more rows
```

It is the East Fork.
